

JERASH

For Oil Services

Profile

Jerash

For Oil Services

About Jerash

We at Jerash oilfield services set for ourselves
a clear vision and mission.

Our team here in jerash, and our partners all over the world have a rich knowledge and experience in oil and gas upstream and downstream projects which added a great value to our achievements by delivering safe & high quality services and accomplishing our clients jobs and projects on time with client's satisfaction.

The company serves their customers with a commitment to total customer care, broad range of products and services through its Well Services, Pipeline & Process Services and Tubular Running Services divisions.

We highly believe in appropriate recruiting & training, safest & top quality performance most financial efficient performance, teamwork, partnerships and these are our success factors.

We are committed to ensure that QHSE management system identifies and fulfils customer's requirements in the delivery of our products and services.

We thank all our clients who gave us the privilege to do business with them and we look always to expand our clients and partners list and looking to new challenges with full commitment to the safest and most economical operations.

Jerash careers

”

Jerash believe that our people are the foundation of our success.

We pride ourselves in offering a clear career path, a diverse work environment, early responsibility with the right training and mentorship, to help you grow both personally and professionally.

Joining the Gulf Energy team means being part of a winning team, where both the team and individual contributions are encouraged and valued.

JERASH
For Oil Services

Jerash Services

Jerash has continually expanded the services offered to serve our customers.

PRODUCTION SERVICES

- Coiled Tubing
- Drilling Fluid
- Cementing
- Nitrogen Services
- Filtration Services
- Pipelines & Industrial Services
- Water & Production Assurance
- Artificial Lift Services

WIRELINE LOGGING SERVICES

- Wireline Logging Services
- Well Testing Services
- Stimulation & Pumping
- Thru-Tubing Intervention
- Slickline Services
- Completions
- Scaffolding Services

JERASH
For Oil Services

CONSULTANCY SUPPORT

- Importing machinery
- Importing chemicals
- Importing gas stations equipments
- Processing and supplying
- Customs Clearance
- Explosive Services
- Inspection Services
- Training & Technical Support

FUEL STATIONS MAINTENANCE

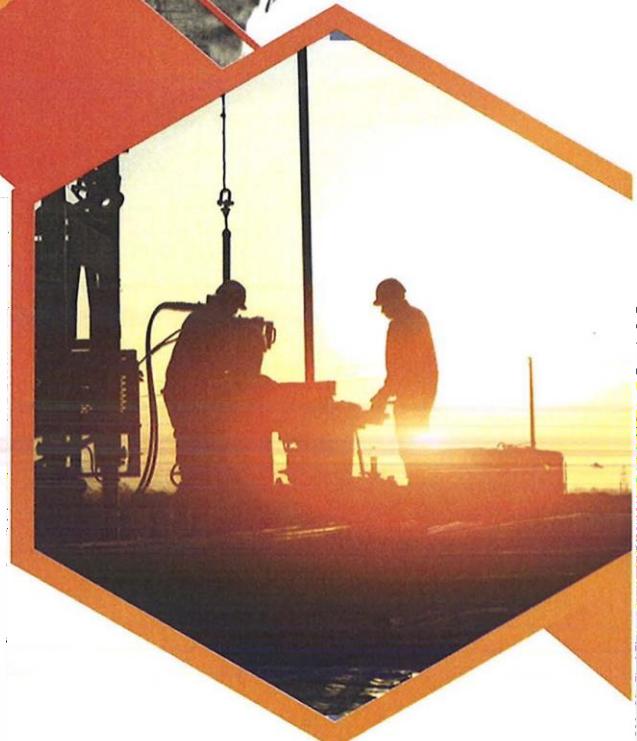

- Inspect & Provide Smart Solutions
- Contracting for Production Industry

MUD LOGGING SERVICES

INTEGRATED DRILLING SERVICES

Jerash for Petroleum Services

Wireline Logging Services

erash offers customized solutions to maximize production for more efficient pay—no matter where your field is in the well life cycle. Our innovative technologies, coupled with asset expertise from our highly specialized multidisciplinary geoscientists collaborating with your teams, help you gain deeper reservoir insight. We also bring expertise to diagnose, design, and deliver engineering perforating and well intervention solutions to maximize production from your reservoirs.

Well Testing Services

We provide safe, customized, and dependable well testing and blowout flow control for the oil and gas industry for onshore solutions.

We provide our customers with a world class fleet of equipment set up to rapidly mobilize to any job site and is capable of handling hazardous flow streams including H₂S, CO₂, solids, high wellhead pressures, and temperatures. Our processes reduce project cost, while minimizing waste and associated disposal liabilities

Stimulation & Pumping

Matrix stimulation and pumping services are provided in all our operations, utilizing modern technology and state-of-the-art equipment.

Thru-Tubing Intervention

We provide comprehensive oilfield solutions for all thru-tubing intervention requirements of your well, from milling to thru-tubing fishing and thru-tubing well intervention. We have an experienced team of international and local experts from around the world who will offer you the perfect solution for your well problems, which can then be carried out by our expert field engineers.

Slickline Services

Our slickline units provide a variety of well intervention services and measurements that are essential during the time a well is in production. This includes the control of sliding sleeves to open and close access to zones and the replacement of gas lift valves. Additionally, the capability to measure the depth of the well and well perforation (using run gun assemblies) and measuring down-hole pressures and temperatures using run gauge.

PRODUCTION SERVICES

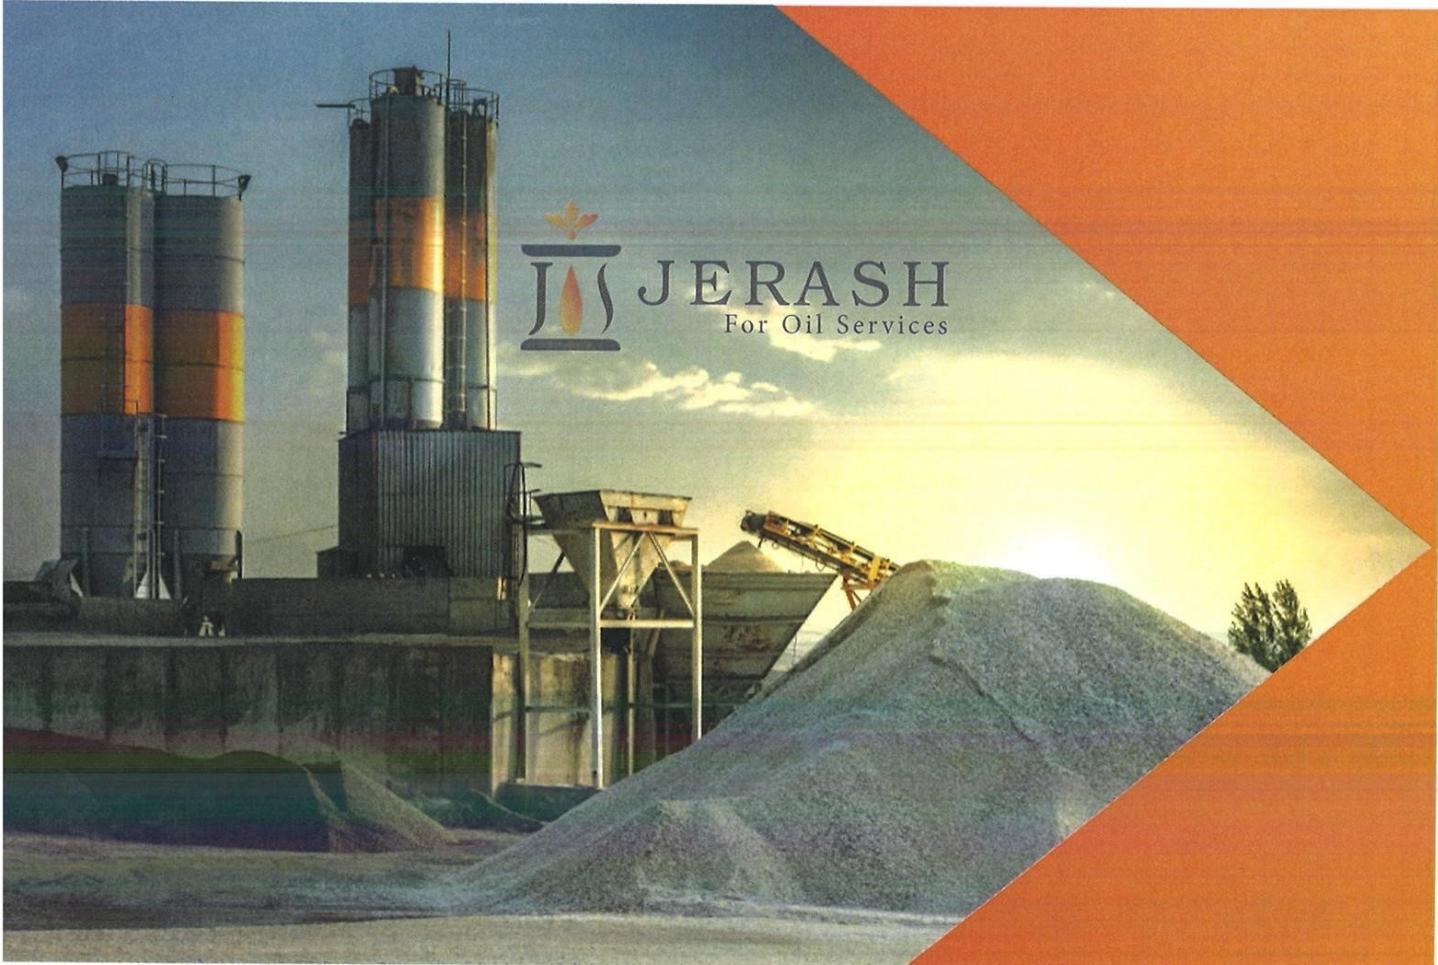

Cementing

We experience in cementing services across the Middle East, North Africa & Asia. As new technologies and techniques become routine, operators are demanding new approaches to well cementing.

Exploring high pressure, high temperature, deep gas potentials and having to comply with stringent environmental regulations drives the need to continuously improve cementing systems and equipment designs.

Coiled Tubing

We have extensive coiled tubing experience in stimulation, nitrogen lifting, fishing, milling, clean-out scale removal, thru-tubing plug setting, horizontal logging and other complex well applications.

Artificial Lift Services

We are a full-service provider of sucker rod pumping systems and associated field services. We also provide gas lift systems & downhole monitoring systems. We maintain a downhole pump workshop that is equipped with up-to-date equipment and tools like pump testers, barrel honing & API Beam pump gauges.

Water & Production Assurance

Jerash is equipped with a strong portfolio of production assurance chemicals to ensure that hydrocarbon production from specific reservoirs meet the desired production targets. This is achieved through strong collaboration with selected chemical companies and academic institutions, and by establishing an in-house technical team of engineers and laboratory capabilities.

Pipelines & Industrial Services

We are recognized as an innovative and high-quality solutions and services provider to the downstream and midstream oil & gas and petrochemical industries. These services can be provided during pre-commissioning and commissioning of new facilities or during turnaround maintenance of existing facilities. We employ innovative technologies and the highest safety and quality standards for pipeline services.

Nitrogen Services

We offer complete nitrogen service packages to our clients. We have a world-class nitrogen fleet comprising of some of the most technically advanced equipment and applications in the industry. We provide low, intermediate and high-rate units. Our operational capabilities range from stand-alone nitrogen services, such as freeing stuck drill pipes and unloading or cleaning out wellbores, to supplying our coiled tubing, stimulation and cementing services with the essential gaseous components necessary for positive results in various applications.

Completions

We provide surface and subsurface safety systems, high-pressure packer systems, flow controls, service tools, expandable liner technology, VIT Technology for Steam applications, and engineering capabilities with manufacturing capacity and testing facilities. We take a systems approach to well completions for maximum recovery in addition to intelligent completion architectures.

Filtration Services

We provide filtration services to our clients to help them meet their requirements, including cost-saving and avoiding related operational problems due to non-filtered fluids, especially across the pay zone.

CONSULTANCY SUPPORT

Importing machinery

Import, purchase and sale of machinery, equipment, and various materials that enter the oil industry

Importing chemicals

Import, purchase and sale of adequate chemicals that are involved in the processing of oil extracted in surface facilities.

Importing gas stations equipments

Import, purchase and sale of all equipment and pumps that enter the distribution sector such as gas stations and filtering sectors such as refineries and others

Processing and supplying

Processing and supplying all kinds of goods, support and services to assist drilling, research, exploration and seismic survey

Explosive Services

Use and storage of conventional and non-conventional explosives for oil and gas extraction.

Inspection Services

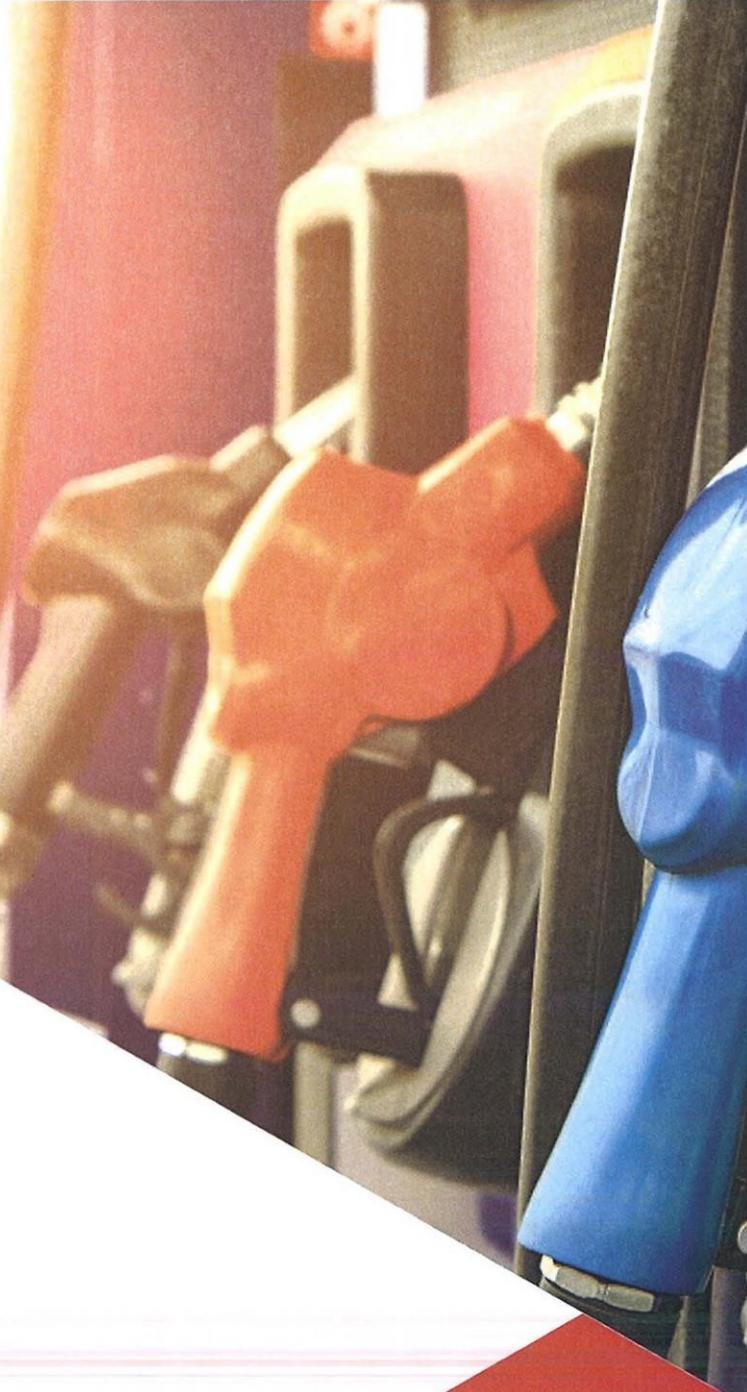

The company focuses on all kinds of quality control, NDT, material testing and inspection. The company is also deeply involved in maintenance inspection in the oil and gas industry and petrochemical plants, both offshore and onshore.

Customs Clearance

Providing services such as import, transport, use, storage and customs clearance for the oil and gas sector and its contracting companies in the areas of exploration, distribution, liquidation and drilling.

Training & Technical Support

In a world of fast-changing regulation and rapidly advancing technology, it is crucial to keep your staff up to speed with changes in technology, standards and regulation.

FUEL STATIONS MAINTENANCE

Inspect & Provide Smart Solutions

Jerash team will first inspect, analyze and study any case before giving or following results. Our team is capable to educate you technically and will aid you to reach the best possible solution for the application on hand.

Contracting for Production Industry

If you want to build or renovate a petrol station, we have you covered throughout the process. We can take care of the design & scheduling, planning & regulatory approvals, risk assessment & mitigation, procurement & budget control, construction & handover. To see our specialised Fuel & Gas Industry

Mud Logging Services

Mud logging is the process of creating a record of geological and drilling data by carefully monitoring the drilling medium throughout the circulation system and testing the cuttings of rock brought to the surface through drilling medium. This provides the drillers with necessary and key information that helps to improve drilling operations. Mud Logging involves sophisticated methods for analysis of wellbore data to identify hydrocarbon zones and improve safety through early detection of potential drilling hazards.

Integrated Drilling Services

Our company is offering new services, cutting edge technologies, highest possible value at very competitive rates, especially for drilling operations.

HSE

HSE

Jaresh recognizes that an essential factor in its business success is the emphasis it places on Health, 4, and Environment (HSE).

HSE is a fundamental element of all of our business activities. This commitment is an integral part of the service delivery workflows encompassing the organization from the lowest levels to the highest, including all contractors.

The leadership teams have full responsibility, and accountability to drive this culture by ensuring effective implementation of our standards.

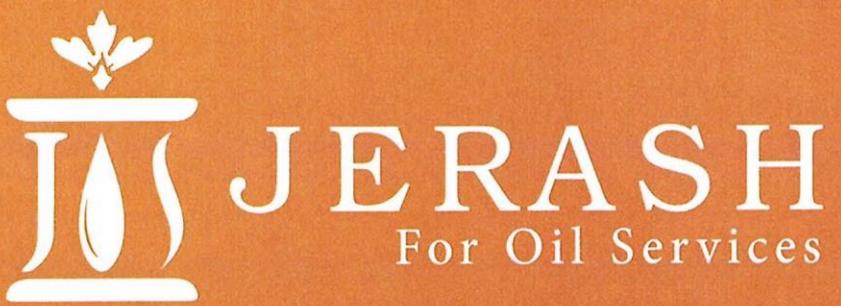

In addition, we must comply to legal, international, national, customer and other applicable standards and requirements whichever are more stringent. Our ultimate aim is for Gulf Energy to be recognized wherever we operate as the leader in HSE

We will demonstrate our commitment by

- Setting measurable HSE objectives as part of our business performance and monitoring them for continuous improvement
- Driving HSE behavior with a no defect mindset and rewarding outstanding HSE performance and initiatives
- Eliminating undesirable HSE events and accidents with a strong reporting culture and effective investigation of near-misses
- Training our workforce and contractors on our HSE standards to prevent losses
- Effectively communicating our HSE policies, standards, programs and performance
- Protecting the health, safety and security of our people and contractors at all times
- Meeting legal, international, national, customer and other applicable standards and requirements
- Protecting the environment through spill prevention, reduction of natural resource consumption and emissions, and the reduction and recycling of waste
- Ensuring HSE is considered while designing, engineering and deploying our services and products
- Maintaining an updated response plan to minimize the effect of any business disruption or crisis.

Energy employee and contractor are accountable to ensure compliance with this policy.

We will update this policy regularly to ensure that it still reflects our strong commitment and focus on HSE.
